

# How to make a movie

CET  
Movie maker

Kristen McWethy  
bkm officeworks

**Steelcase**

# 1st step

## Choose your path

Keep in mind:

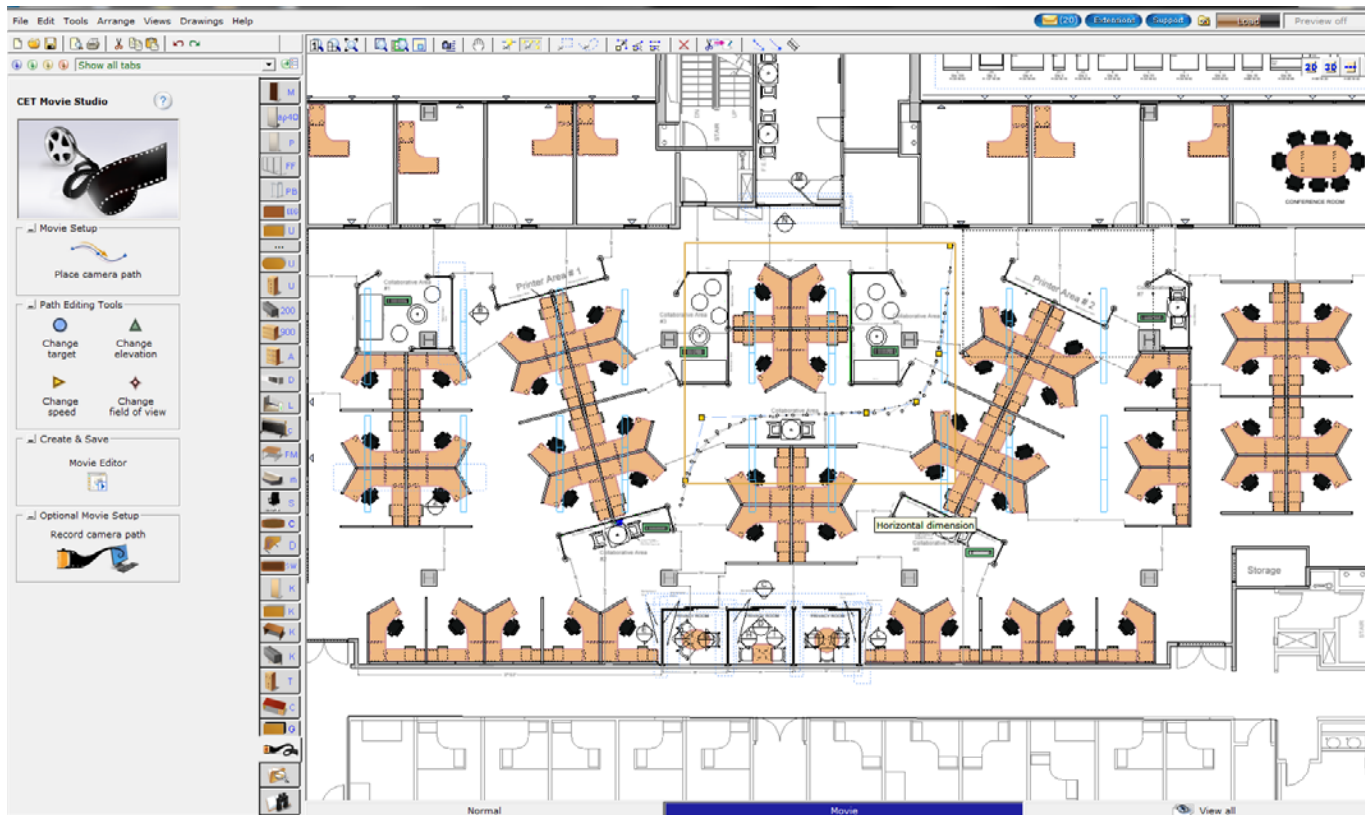

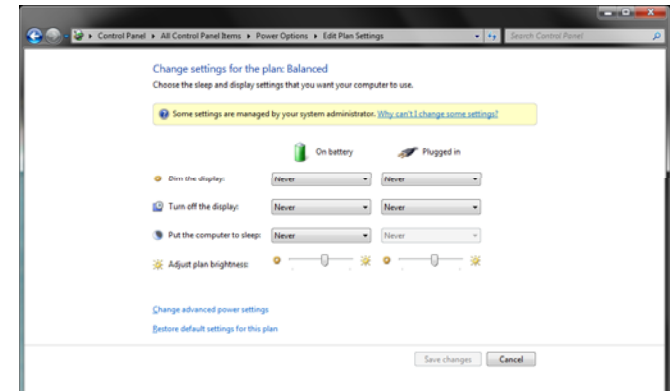

Make sure your settings on your computer do not go to sleep or hibernate or even screen saver before you begin a movie (control panel, power options, edit plan settings)

product placement

natural path of travel

not too long

Ceiling & window details (background for looking out the windows – under control panel)

## 2<sup>nd</sup> step

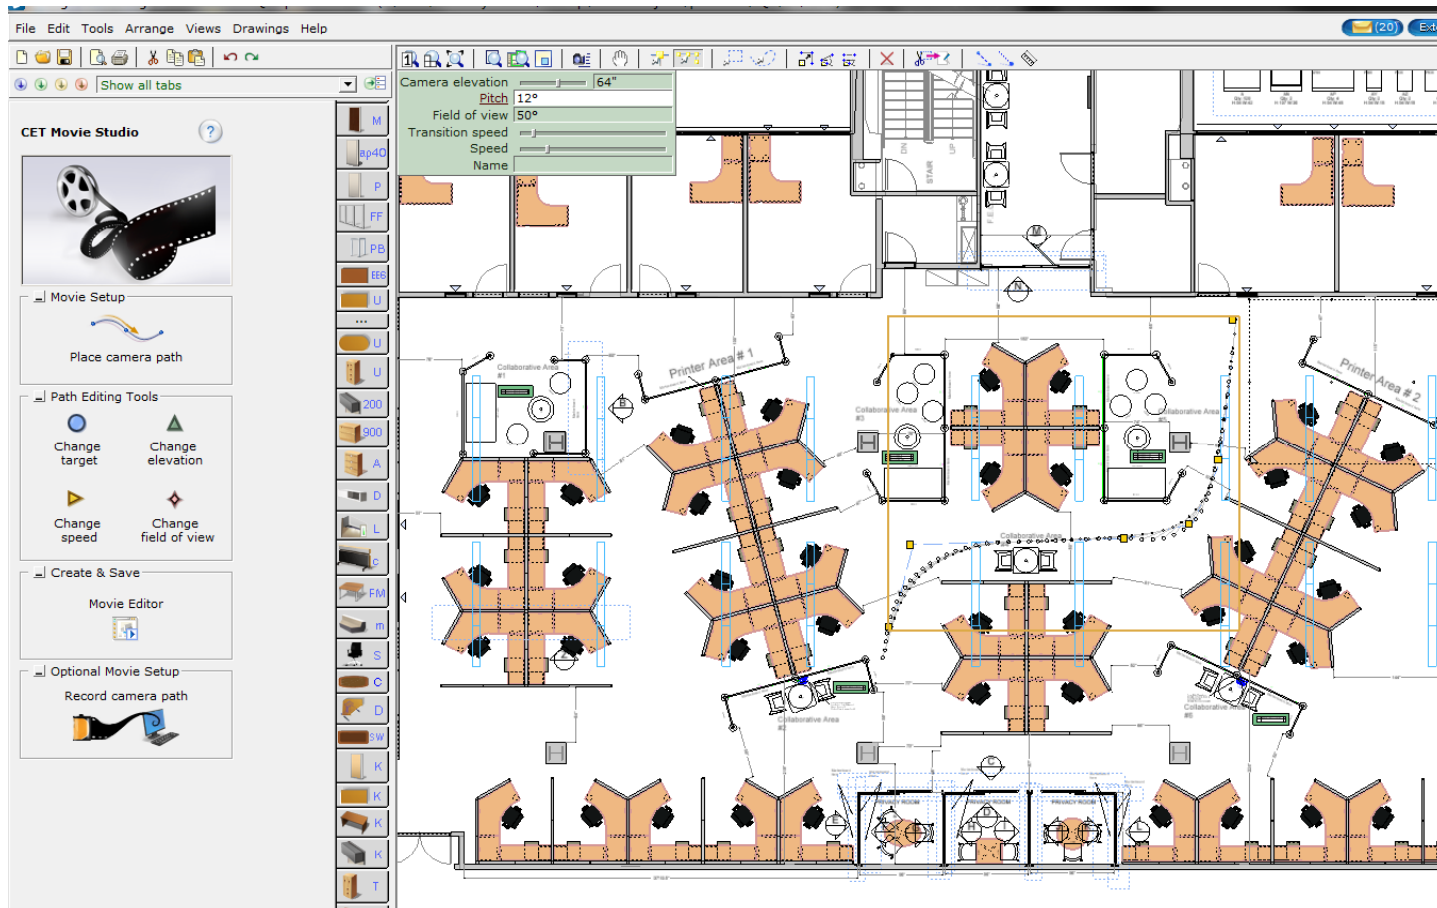

### Click on path and window comes up

Keep in mind:

Elevation = eye level – for the most part keep 64"

Pitch –make sure not to cut off the ceiling... keep within 8-12

Field of view = peripheral vision – as wide as possible movie will crop what you see in preview

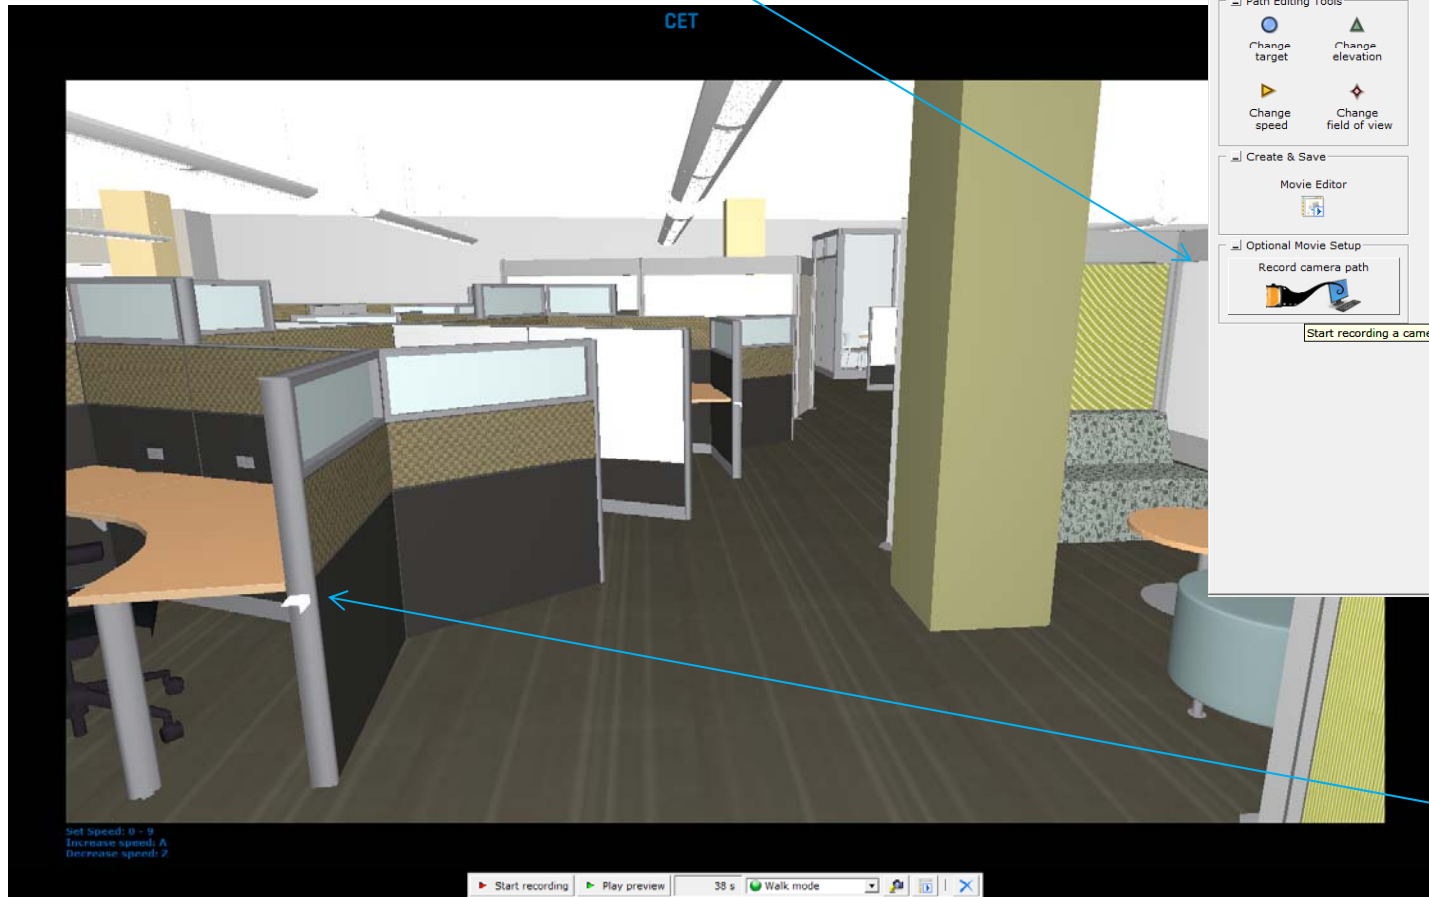

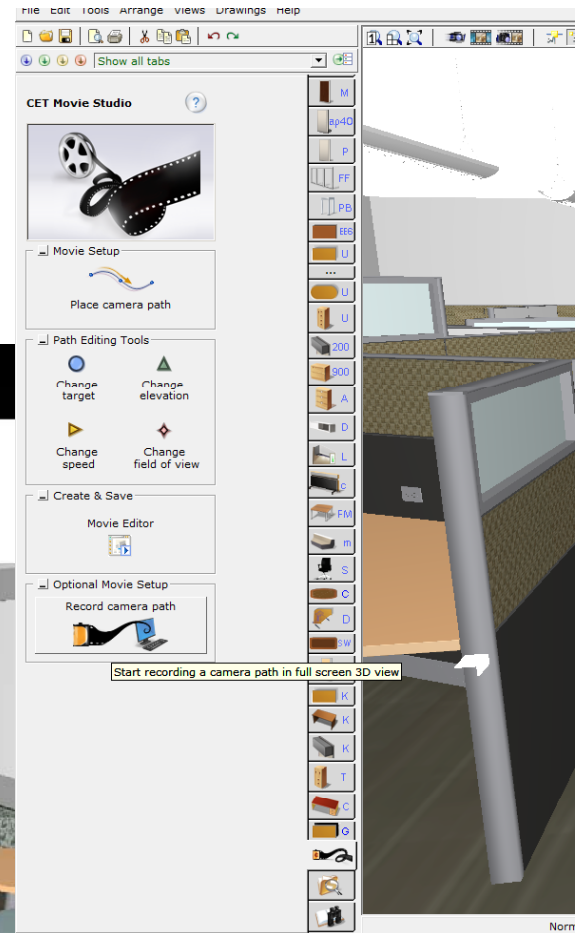

# 3rd step

## Click on movie setup

Keep in mind:

Make sure nothing is floating or in wrong place ( example the side support bracket in this image)  
Need to be in 3d view to generate a preview

Side support floating

Click play

# 4th step

## Add Visual Interest

Keep in mind:

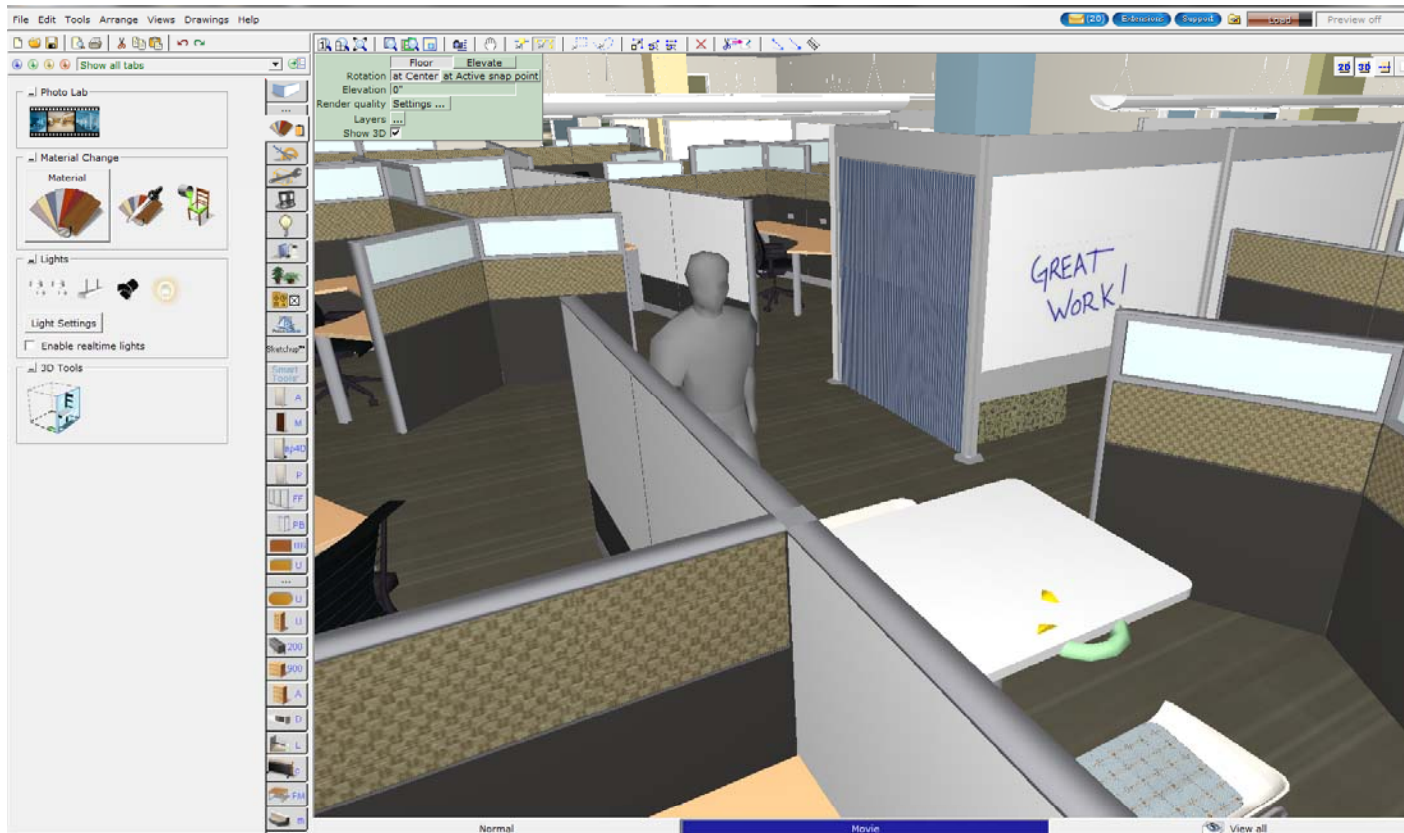

People, plants, animals.... In google sketch-up

Markerboards- add jpegs

Windows - backgrounds....

Monitors – add client website

Artwork & Paint on the walls

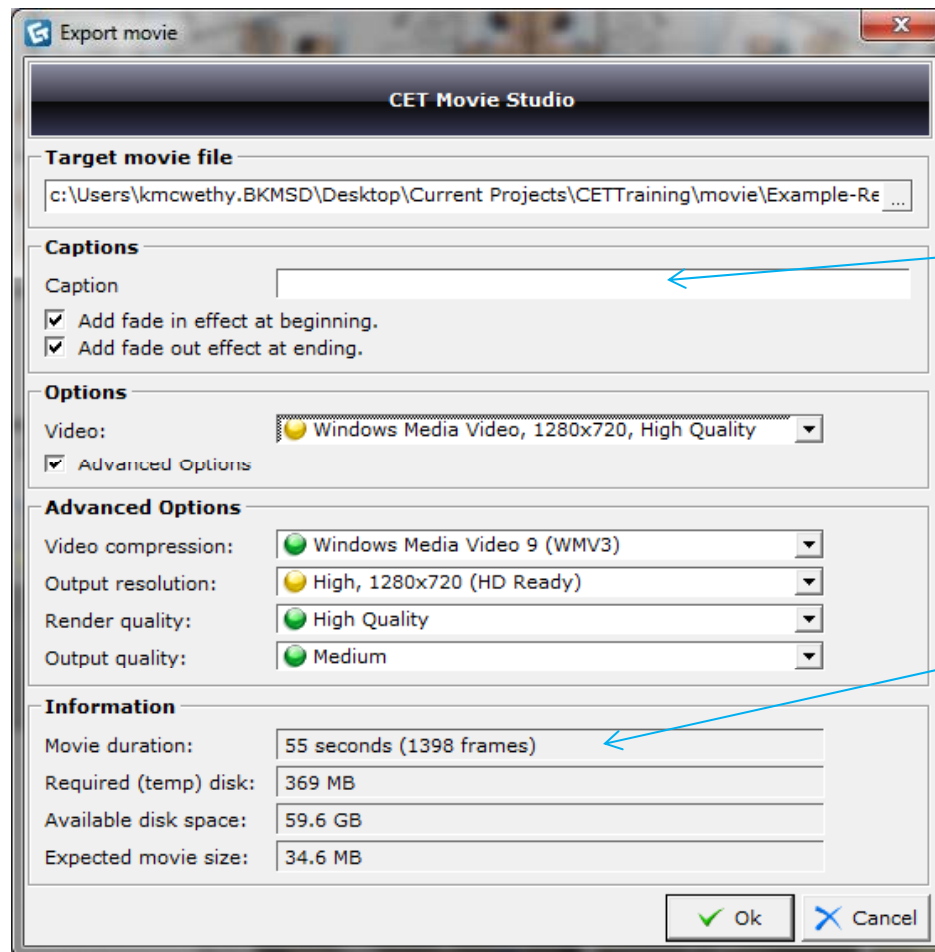

# 5<sup>TH</sup> STEP

Select your file path

Select your options & advanced options settings

We have found keeping under 1000 frames has the best success

Press okay and wait– this can take 6hours – 3 days to generate or longer. You can do other things while this is going, but not in CET.

Remembers last name... make sure to update

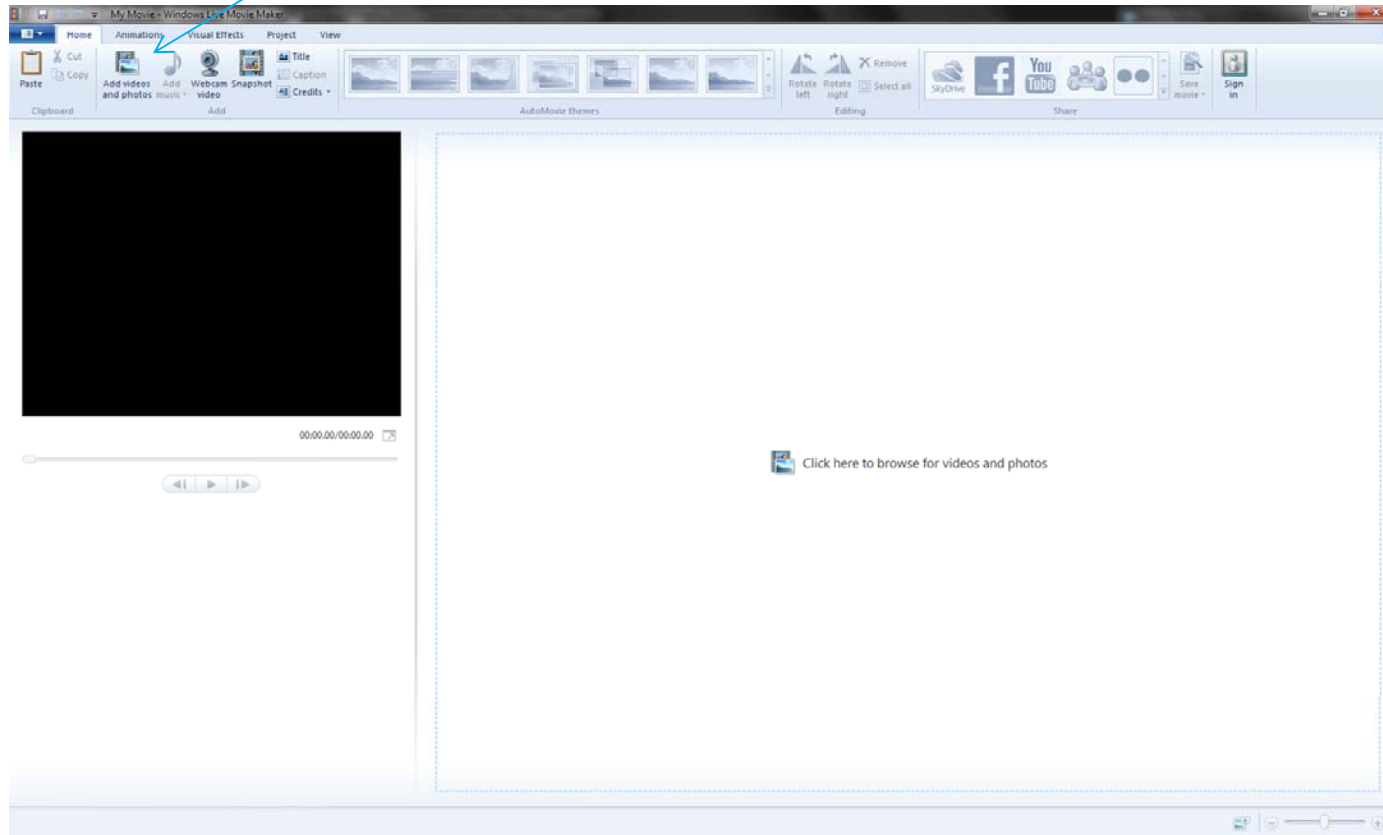

Skip this here, do in movie maker

Keep under 1000

# 6<sup>th</sup> step Movie maker
